-!- FUNCTION: Ice nucleation proteins enable bacteria to nucleate crystallization in supercooled water.
-!- SUBCELLIULAR LOCATION: Outer membrane (By similarity).
-!- DOMAIN: CONTAINS 153 IMPERFOT REPEATS OF THE CONSENSUS OCTAPERINE A-G-Y-G-S-T-L-T; FUNTHER ON A 16-RESIDUE AND A REGIONAL 48-RESIDUE PERIODICITY IS SUPERINFOSED.
-!- MISCELLANEOUS: A STRUCTURAL MODEL IS SUGGESTED IN WHICH THE ICE NUCLEATION PROTEIN DISPLAYS A SYMMETRY RELATED TO THAT OF ICE.
-!- SIMILARITY: Belongs to the bacterial ice nucleation protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SEQUENCE FROW N.A.

-! FUNCTION: Ice mucleation proceins enable bacteria to nucleate crystallization in supercooled water.

-! SUBCELLULAR LOCATION: Outer membrane.

-! SUBCELLULAR IDCATION: Outer membrane.

-! DAMAIN: CONTAINS THRERERET REPEATS OF A CONSENSUS OCTAPEPTIDE A-G-Y-G-S-T-X-T; FURTHER ON A 16-RESIDUE AND A REGIONAL 48-RESIDUE PERIODICITY IS SUPERIMPOSED.

-! MISCELLANBOUS: A STRUCTURAL MODEL IS SUGGESTED IN WHICH THE ICE NUCLEATION PROTEIN DISELAYS A SYMMETRY RELATED TO THAT OF ICE.

-! SIMILARITY: Belongs to the bacterial ice nucleation protein
                                                                                                        Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        -:- FUNCTION: Ice nucleation proteins enable bacteria to nucleate crystallization in supercooled water.
-: SUBCELLULAR LOCATION: Outer membrane.
-:- DOMAIN: CONTAINS 126 IMPERED REPEATS OF A CONSENSUS OCTAPEPTIDE A-G-Y-G-S-T-X-T; FUNTHER ON A 16-RESIDUE AND A REGIONAL 48-RESIDUE PREDIOTICITY IS SUPERINPOSED.
-:- MISCELLANEOUS: A STRUCTURAL MODEL IS SUGGESTED IN WHICH THE ICE NUCLEARION PROTEIN DISBLAYS A SYMMETRY RELATED TO THAT OF ICE.
-:- SIMILARITY: Belongs to the bacterial ice nucleation protein

"An ice nucleation active gene of Erwinia ananas. Sequence similar to those of Pseudomonas species and regions required for ice nucleation activity."

FEBS Lett. 258:297-300(1989).

-! FUNCTION: Ice nucleation proteins enable bacteria to nucleate. STRSCELDLAR LOCATION: Outer membrane (By similarity).

-! STRSCELDLAR LOCATION: Outer membrane (By similarity).

-! STRSCELDLAR A. A.G. Y. G. S. T. Y. T. FURTHER ON A 16-RESIDUE AND A RECIONAL 48-RESIDUE PRRIODICITY IS SUPERIMPOSED.

-! SIMILARITY: Belongs to the bacterial ice nucleation protein

J. Biol. Chem. 267:1888-1895(1992).

-!- FUNCTION: Has an integral role during the infection of macrophages in the mammalian host.

-!- GATALYIC ACTIVITY: Preference for hydrophobic residues at Pl and Pl' and basic residues at P2 and P3'. A model nonapeptide is cleaved at _Ala-Tyr-|-Leu-Lys-Lys-.

-!- COFACTON: Binds 1 zinc ion per subunit (By similarity).

-!- SUBCELLULAR LOCATION: Attrached to the membrane by a GPI-anchor.

-!- SIMILARITY: Belongs to peptidase family M8.
                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             [2]

N-PSDB; AAC64628. Recombinant agfA gene having a segment replaced by a foreign DNA
which encodes foreign epitope or antigen, expresses recombinant Ag protein useful for eliciting immune response in animal.  Disclosure; Page 138; 139pp; English.  The present invention describes a recombinant agfA gene (I) where segment of the gene has been replaced by a segment of a foreign plope or antigen. Also describe sequence which encodes a foreign epitope or antigen. Also describe (I) use of thin aggregative fimbriae (SEPIT/TAF) nucleation depend assembly system of strains of Salmonella, Escherichia coli and Entrobacteriaceae for the production of fimbriae comprising recompance of the production of fimbriae comprising recompand and AgfA, honologue fimbrin subunits, respectively; (2)	which encodes foreign epitope or antigen, protein useful for eliciting immune respondance; Page 138; 139pp; English.  The present invention describes a recombisegment of the gene has been replaced by sequence which encodes a foreign epitope (1) use of thin aggregative fimbriae (SEE assembly system of strains of Salmonella.  Enterobacteriaceae for the production of	which encodes foreign epitope or antigen, protein useful for eliciting immune respondiction useful for eliciting immune respondictions.  The present invention describes a recombisegment of the gene has been replaced by sequence which encodes a foreign epitope (1) use of thin aggregative fimbriae (SEE agsembly system of strains of Salmonella, an excharteriaceae for the production of	which encodes foreign epitope or antigen, protein useful for eliciting immune respondance; Page 138; 139pp; English.  The present invention describes a recombisegment of the gene has been replaced by sequence which encodes a foreign epitope (1) use of thin aggregative fimbriae (SER assembly system of strains of Salmonella.	N-PSDB; AAC64628.
Recombinant agra gene naving a segment represent recombinant which encodes foreign epitope or antigen, expresses recombinant protein useful for eliciting immune response in animal.  Disclosure; Page 138; 139pp; English.  The present invention describes a recombinant agfA gene (I) where segment of the gene has been replaced by a segment of a foreign sequence which encodes a foreign epitope or antigen. Also describe to use of thin aggregative fimbriae (SEF17/TAF) nucleation depends sembly system of strains of Salmonella, Escherichia coli and Enterobacterizedae for the production of fimbriae comprising recompany. AgfA. CscA and AcfA. CscA and AcfA. CscA and AcfA. CscA and AcfA. Monologue fimbrin subunits, respectively; (2)	Akecombinant aging and aging a segment represent of the kecombinant by a total which encodes foreign epitope or antigen, expresses recombinant protein useful for eliciting immune response in animal.  Disclosure, Page 138; 139pp; English.  The present invention describes a recombinant agfA gene (I) where segment of the gene has been replaced by a segment of a foreign segment of the gene has been replaced by a segment of a foreign segment of the gene has been replaced by a segment of a foreign epitope or antigen. Also described it is not encoded a foreign epitope or antigen. Also described sesembly system of strains of Salmonella, Escherichia coli and Enterobacteriaceae for the production of fimbriae comprising reconstraints.	Recombinant aging generating a segment represent recombinant by a long which encodes foreign epitope or antigen, expresses recombinant protein useful for eliciting immune response in animal.  Disclosure, Page 138; 139pp; English.  The present invention describes a recombinant agfh gene (I) where segment of the gene has been replaced by a segment of a foreign Enguence which encodes a foreign epitope or antigen. Also described in use of thin aggregative fimbriae (SEFI)/TAR) nucleation depends assembly system of strains of Salmonella, Escherichia coli and Enrerobacteriaceae for the production of fimbriae comprising recomprising recomprising recompressions.	Recombinant aging gene naving a Segment represent variety, which encodes foreign epitope or antigen, expresses recombinant protein useful for eliciting immune response in animal.  Disclosure, Page 138; 139pp; English.  The present invention describes a recombinant agfA gene (1) where segment of the gene has been replaced by a segment of a foreign sequence which encodes a foreign epitope or antigen. Also describe (1) use of thin aggregative fimbriae (SERIT/TAR) nucleation depen assembly system of strains of Sahmonella.	N-PSDB; AAC64628.
Recombinant agfA gene having a segment replaced by a foreign DNA, which encodes foreign epitope or antigen, expresses recombinant A protein useful for eliciting immune response in animal.  Disclosure, Page 138; 139pp; English.  The present invention describes a recombinant agfA gene (I) where segment of the gene has been replaced by a segment of a foreign psequence which encodes a foreign epitope or antigen. Also describe use of thin aggregative fimbriae (SEF17/TAF) nucleation dependassembly system of strains of Salmonella, Escherichia coli and Enterobacteriaceae for the production of fimbriae comprising recombined and AgfA. CscA and AgfA. CscA and AgfA. CscA and AgfA. CscA and AgfA. More fimbriae insubunits, respectively? (2)	Recombinant agfA gene having a segment replaced by a foreign DNA which encodes foreign epitope or antigen, expresses recombinant A protein useful for eliciting immune response in animal.  Disclosure, Page 138; 139pp; English.  The present invention describes a recombinant agfA gene (I) where segment of the gene has been replaced by a segment of a foreign [Sequence which encodes a foreign epitope or antigen. Also describ (I) use of thin aggregative fimbriae (SEFI/TAF) also describ assembly system of Strains of Salmonella, Escherichia coli and Enterobacteriaceae for the production of fimbriae comprising recomplication.	Recombinant agfA gene having a segment replaced by a foreign DNA, which encodes foreign epitope or antigen, expresses recombinant A protein useful for eliciting immune response in animal.  Disclosure, Page 138; 139pp; English.  The present invention describes a recombinant agfA gene (I) where segment of the gene has been replaced by a segment of a foreign sequence which encodes a foreign epitope or antigen. Also describe in use of thin aggregative fimbriae (SEF17/TAF) nucleation depends assembly system of strains of Sanhonella: Bscherichia coli and Enterchareae for the production of fimbriae comprising reaching the strains of sanhonella:	Recombinant agfA gene having a segment replaced by a foreign DNA, which encodes foreign epitope or antigen, expresses recombinant A protein useful for eliciting immune response in animal.  Disclosure, Page 138; 139pp; English.  The present invention describes a recombinant agfA gene (I) where segment of the gene has been replaced by a segment of a foreign pagement of the gene has been replaced by a segment of a foreign esquence which encodes a foreign epitope or antigen. Also describe use of thin aggregative fimbriae (SEFIT/TAR) nucleation dependance which aggregative fimbriae (SEFIT/TAR) nucleation dependance which aggregative fimbriae (SEFIT/TAR) nucleation dependance of strains of Salmonella.	N-PSD
Recombinant agfA gene having a segment replaced by a foreign DNA which encodes foreign epitope or antigen, expresses recombinant A protein useful for eliciting immune response in animal.  Disclosure, Page 138; 139pp; English.  The present invention describes a recombinant agfA gene (I) where segment of the gene has been replaced by a segment of a foreign E sequence which encodes a foreign epitope or antigen. Also describ (1) use of thin aggregative fimbriae (SEFI)/TAR) nucleation depenancembly system of strains of Salmonella, Escherichia coli and Enterobacteriaceae for the production of fimbriae comprising recombined assembly system of strains of salmonella, Escherichia coli and AgfA. CseA and AgfA. CseA homologue fimbrin subunits, respectively; (2)	Recombinant agfA gene having a segment replaced by a foreign DNA which encodes foreign epitope or antigen, expresses recombinant A protein useful for eliciting immune response in animal.  Disclosure, Page 138; 139pp; English.  The present invention describes a recombinant agfA gene (1) where segment of the gene has been replaced by a segment of a foreign E segment of the gene foreign epitope or antigen. Also described to use of thin aggregative fimbriae (SEF17/TAF) nucleation dependacembly system of Strains of Salmonella, Escherichia coli and Enterobacteriaceae for the production of fimbriae congrising reconstraints.	Recombinant agfA gene having a segment replaced by a foreign DNA which encodes foreign epitope or antigen, expresses recombinant A protein useful for eliciting immune response in animal.  Disclosure, Page 138; 139pp; English.  The present invention describes a recombinant agfA gene (I) where segment of the gene has been replaced by a segment of a foreign E sequence which encodes a foreign epitope or antigen. Also describ (1) use of thin aggregative fimbriae (SERIV/TAF) nucleation dependancent agene of strains of Salmonella, Escherichia coli and Enterchareae for the production of fimbriae comprising recomprising recomprising recompresses.	Recombinant agfA gene having a segment replaced by a foreign DNA which encodes foreign epitope or antigen, expresses recombinant A protein useful for eliciting immune response in animal.  Disclosure, Page 138; 139pp; English.  The present invention describes a recombinant agfA gene (I) where segment of the gene has been replaced by a segment of a foreign E sequence which encodes a foreign epitope or antigen. Also describ(1) use of thin aggregative fimbriae (SERI/TYAR) nucleation deperial assembly system of strains of Salmonells, Escherichia recombinations.	N-PSD
Recombinant agfA gene having a segment replaced by a foreign DNA which encodes foreign epitope or antigen, expresses recombinant A protein useful for eliciting immune response in animal.  Disclosure, Page 138; 139pp; English.  The present invention describes a recombinant agfA gene (1) where segment of the gene has been replaced by a segment of a foreign segmence which encodes a foreign epitope or antigen. Also describe use of thin aggregative fimbriae (SEF17/TAF) nucleation depen assembly system of strains of Salmonella, Escherichia coli and ansembly system of strains of Salmonella, Escherichia coli and AgfA. CsaA and AgfA. Chanloque fimbrin subunits, respectively; (2)	Recombinant agfA gene having a segment replaced by a foreign DNA which encodes foreign epitope or antigen, expresses recombinant protein useful for eliciting immune response in animal.  Disclosure, Page 138; 139pp; English.  The present invention describes a recombinant agfA gene (I) where segment of the gene has been replaced by a segment of a foreign reparement of the gene has been replaced by a segment of a foreign epitope or antigen. Also described in aggregative fimbriae (SERI7/TAF) nucleation depends sembly system of strains of Salmonella, Escherichia coli and Enterobacteriaceae for the production of fimbriae congrising reconstraints.	Recombinant agfA gene having a segment replaced by a foreign DNA which encodes foreign epitope or antigen, expresses recombinant A protein useful for eliciting immune response in animal.  Disclosure, Page 138, 139pp, English.  The present invention describes a recombinant agfA gene (I) where segment of the gene has been replaced by a segment of a foreign Esequence which encodes a foreign epitope or antigen. Also describ (1) use of thin aggregative fimbriae (SEFI)/TAR) nucleation depends assembly system of strains of Salmonella, Escherichia coli and Enrarchance and Estrains of Salmonella, Escherichia coli and Enrarchance and Estrains of Salmonella, Escherichia coli and Enrarchance and Estrains of Calmonella, Escherichia coli and Enrarchance and Estrains of Calmonella, Escherichia coli and Enrarchance comprising recompression and compression ombinant agfA gene having a segment replaced by a foreign DNA which encodes foreign epitope or antigen, expresses recombinant A protein useful for eliciting immune response in animal.  Disclosure, Page 138; 139pp; English.  The present invention describes a recombinant agfA gene (I) where segment of the gene has been replaced by a segment of a foreign sequence which encodes a foreign epitope or antigen. Also describe use of thin aggregative fimbriae (SERIT/TAR) nucleation dependassembly system of strains of Salmonella.	144	
N-PBDB; AACCACAS. N-PBDB; AACCACAS. Disclosure; Page 138; 139pp; English. The present invention describes a recombinant agfA gene (I) where segment of the gene has been replaced by a segment of a foreign E sequence which encodes a foreign epitope or antigen. Also described in use of thin aggregative fimbriae (SERI/TAR) nucleation dependence which encodes a foreign epitope or antigen. Also described by system of strains of Salmonella, Escherichia coll and Enrachatement encomprising recomprising recomprising recomprising recomprising recomprising recomprising recompressions.	05-APR-1900; 2000WO-CA000356. 05-APR-1999; 99US-0127888P. (UVVI-) UNIV VICTORIA. White AP, Doran JL, Collison SK, Kay WW; WPI; 2000-672631/65. N-PSDB; AAC64628. Recombinant agfA gene having a segment replaced by a foreign DNA which encodes foreign epitope or antigen, expresses recombinant Aprotein useful for eliciting immune response in animal. Disclosure; Page 138; 139pp; English. The present invention describes a recombinant agfA gene (I) where segment of the gene has been replaced by a segment of a foreign Esegment of the gene has been replaced by a segment of a foreign Esegment of the gene has dereign epitope or antigen. Also describe used thin aggregative fimbriae (SERI) TARRY nucleation depering assembly system of strains of Salmonella.	05-APR-2000; 2000WO-CA000356. 05-APR-1999; 99US-0127888P. (UYVI-) UNIV VICTORIA. White AP, Doran JL, Collison SK,
05-APR-2000; 2000WO-CA000356. 05-APR-1999; 99US-0127888P. (UTVI-) UNIV VICTORIA. White AP, Doran JL, Collison SK, Kay WW; WPI; 2000-672631/65. N-PSDB; AAC64628. Recombinant agfA gene having a segment replaced by a foreign DNA which encodes foreign epitope or antigen, expresses recombinant A protein useful for eliciting immune response in animal.  Disclosure; Page 138; 139pp; English.  The present invention describes a recombinant agfA gene (I) where segment of the gene has been replaced by a segment of a foreign E segment of the neodes a foreign epitope or antigen. Also describ (1) use of thin aggregative fimbriae (SERI/YTAR) nucleation dependance which encodes a foreign epitope or antigen. Also describ (1) use of thin aggregative fimbriae (SERI/YTAR) nucleation dependance and AcfA-homologue fimbriae in subunits, respectively; (2) AcfA. CscA and AcfA-homologue fimbrin subunits, respectively; (2)	05-APR-2000; 2000WO-CA000356.  05-APR-1999; 99US-0127888P.  (UVVI-) UNIV VICTORIA.  White Ab, Doran JL, Collison SK, Kay WW;  WPI; 2000-672631/65.  N-PSDB; AAC64628.  Recombinant agfA gene having a segment replaced by a foreign DNA which encodes foreign epitope or antigen, expresses recombinant A protein useful for eliciting immune response in animal.  Disclosure; Page 138; 139pp; English.  The present invention describes a recombinant agfA gene (I) where segment of the gene has been replaced by a segment of a foreign E segment of the gene has been replaced by a segment of a foreign epitope or antigen. Also describe segment of the gene of strains of Salmbinae (SERI/TAF) nucleation dependence which encodes a foreign epitope or antigen. Also describe assembly system of Strains of Salmbinae comprising recomplexing recombinations.	05-APR-2000; 2000WO-CA000356.  05-APR-1999; 99US-0127888P.  (UTVI-) UNIV VICTORIA.  White AP, Doran JL, Collison SK, Kay WW; WPI; 2000-672631/65.  N-PSDB; AAC64628.  Recombinant agfA gene having a segment replaced by a foreign DNA which encodes foreign epitope or antiqen, expresses recombinant protein useful for eliciting immune response in animal.  Disclosure; Page 138; 139pp; English.  The present invention describes a recombinant agfA gene (I) where segment of the gene has been replaced by a segment of a foreign Esequence which encodes a foreign epitope or antigen. Also describe thin aggregative fimbriae (SEFI)/TAR) nucleation dependence which encodes a foreign epitope or antigen. Also describe assembly system of strains of Salmonella, Escherichia coll and Enrachateria case for the production of fimbriae comprising recomprising recomprising recomprising recompressions.	05-APR-1000; 2000WO-CA000356. 05-APR-1999; 99US-0127888P. (UTVI-) UNIV VICTORIA. White AP, Doran JL, Collison SK, Kay WW; WPI; 2000-672631/65. N-PSDB; AAC64628. Recombinant agfA gene having a segment replaced by a foreign DNA which encodes foreign epitope or antigen, expresses recombinant A protein useful for eliciting immune response in animal. Disclosure; Page 138; 139pp; English. The present invention describes a recombinant agfA gene (I) where segment of the gene has been replaced by a segment of a foreign E segment of the anodes a foreign epitope or antigen. Also describe use of thin aggregative fimbriae (SERI)/TAR) nucleation deperate assembly system of strains of Samonella.	05-APR-2000; 2000WO-CA000356. 05-APR-1999; 99US-0127888P. (UYVI-) UNIV VICTORIA. White AP, Doran JL, Collison SK,
05-APR-1999; 99US-0127888P.  (UVVI-) UNIV VICTORIA.  White AP, Doran JL, Collison SK, Kay WW;  WPI; 2000-672631/65.  N-PSDB; AAC64628.  Recombinant agfA gene having a segment replaced by a foreign DWA which encodes foreign epitope or antigen, expresses recombinant A protein useful for eliciting immune response in animal.  Disclosure; Page 138; 139pp; English.  The present invention describes a recombinant agfA gene (I) where segment of the gene has been replaced by a segment of a foreign E segment of thin aggregative fimbriae (SEFI7/TAF) nucleation dependance which encodes a foreign epitope or antigen. Also describe use of thin aggregative fimbriae (SEFI7/TAF) nucleation dependance which and strains of Salmonella, Escherichia coli and assembly system of strains of Salmonella, Escherichia coli and ApfA. CscA and AcfA-homologue fimbrin subunits, respectively; (2)	05-APR-1999; 99US-0127888P.  (UVVI-) UNIV VICTORIA.  White AP, Doran JL, Collison SK, Kay WW;  WPI; 2000-672631/65.  N-PSDB; AAC64628.  Recombinant agfA gene having a segment replaced by a foreign DNA which encodes foreign epitope or antigen, expresses recombinant protein useful for eliciting immune response in animal.  Disclosure; Page 138; 139pp; English.  The present invention describes a recombinant agfA gene (I) where segment of the gene has been replaced by a segment of a foreign segment of the gene has been replaced by a segment of a foreign epitope or antigen. Also describe cannot be segment of the gene of strains of Salmannella, Escherichia coll and assembly system of Strains of Salmannella, Escherichia coll and Enterobacteriaceae for the production of fimbriae comprising recomplication.	05-APR-1999; 99US-0127888P.  (UYVI-) UNIV VICTORIA.  White AP, Doran JL, Collison SK, Kay WW;  WPI; 2000-672631/65.  N-PSDB; AAC64628.  Recombinant agfA gene having a segment replaced by a foreign DNA which encodes foreign epitope or antigen, expresses recombinant A protein useful for eliciting immune response in animal.  Disclosure; Page 138; 139pp; English.  The present invention describes a recombinant agfA gene (I) where segment of the gene has been replaced by a segment of a foreign Esequence which encodes a foreign epitope or antigen. Also describe in use of thin aggregative fimbriae (SERIYTAR) nucleation dependence which encodes a foreign epitope or antigen. Also describe assembly system of strains of Salmonella, Escherichia coli and Enrachatement agreament of the production of fimbriae comprising recomprising recompressions.	05-APR-1999; 99US-0127888P.  (UVVI-) UNIV VICTORIA.  White AP, Doran JL, Collison SK, Kay WW;  WPI; 2000-672631/65.  N-PSDB; AAC64628.  Recombinant agfA gene having a segment replaced by a foreign DNA which encodes foreign epitope or antigen, expresses recombinant Aprotein useful for eliciting immune response in animal.  Disclosure; Page 138; 139pp; English.  The present invention describes a recombinant agfA gene (I) where segment of the gene has been replaced by a segment of a foreign Esquence which encodes a foreign epitope or antigen. Also describe assembly system of strains of Salmonella, interior and assembly system of strains of Salmonella, interior and coli and	05-APR-1999; 99US-0127888P. (UYVI-) UNIV VICTORIA. White AP, Doran JL, Collison SK,
05-APR-1999; 99US-0127888P.  (UTVI-) UNIV VICTORIA.  White AP, Doran JL, Collison SK, Kay WW;  WPI; 2000-672631/65.  N-PSDB; AAC64628.  Recombinant agfA gene having a segment replaced by a foreign DNA which encodes foreign epitope or antigen, expresses recombinant Aprotein useful for eliciting immune response in animal.  Disclosure; Page 138; 139pp; English.  The present invention describes a recombinant agfA gene (I) where segment of the gene has been replaced by a segment of a foreign Esquence which encodes a foreign epitope or antigen. Also describ(1) use of thin aggregative fimbriae (SEFI7/TAF) nucleation depenasembly system of strains of Salmonella, Escherichia coli and assembly system of strains of Salmonella, Escherichia coli and ApfA. CscA and AcfA-homologue fimbria subunits, respectively? (2)	05-APR-1999; 99US-012788BP.  (UTVI-) UNIV VICTORIA.  White AP, Doran JL, Collison SK, Kay WW;  WPI; 2000-672631/65.  N-PSDB; AAC64628.  Recombinant agfa gene having a segment replaced by a foreign DNA which encodes foreign epitope or antigen, expresses recombinant A protein useful for eliciting immune response in animal.  Disclosure; Page 138; 139pp; English.  The present invention describes a recombinant agfA gene (I) where segment of the gene has been replaced by a segment of a foreign cannot be contined a foreign epitope or antigen. Also describe in assembly system of strains of Salmonella, Escherichia coli and assembly system of Strains of Salmonella, Escherichia coli and Enterobacteriaceae for the production of fimbriae comprising recomplication.	05-APR-1999; 99US-0127888P.  (UTVI-) UNIV VICTORIA.  White AP, Doran JL, Collison SK, Kay WW;  WPI; 2000-672631/65.  N-PSDB; AAC64628.  Recombinant agfA gene having a segment replaced by a foreign DNA which encodes foreign epitope or antigen, expresses recombinant Aprotein useful for eliciting immune response in animal.  Disclosure; Page 138; 139pp; English.  The present invention describes a recombinant agfA gene (I) where segment of the gene has been replaced by a segment of a foreign English assembly by the encodes a foreign epitope or antigen. Also describe in use of thin aggregative fimbriae (SERIYTAR) nucleation dependence which encodes a foreign epitope or antigen. Also describe assembly system of strains of Salmonella, Escherichia coli and Enrarchareae for the production of fimbriae comprising recomprising recompressing recompressing recompressing recompressing recompressing recompressing recompressing recompressing recompressing recompressing recompressing recompressing recompressing recompressions.	05-APR-1999; 99US-0127888P.  (UYVI-) UNIV VICTORIA.  White AP, Doran JL, Collison SK, Kay WW;  WPI; 2000-672631/65.  N-PSDB; AAC64628.  Recombinant agfa gene having a segment replaced by a foreign DNA which encodes foreign epitope or antigen, expresses recombinant protein useful for eliciting immune response in animal.  Disclosure; Page 138; 139pp; English.  The present invention describes a recombinant agfa gene (I) where segment of the gene has been replaced by a segment of a foreign Esquence which encodes a foreign epitope or antigen. Also describe assembly system of strains of Salmonella, incleation dependence which aggregative fimbriae (SERI7/TAR) nucleation dependence which aggregative fimbriae (SERI7/TAR) nucleation dependence which aggregative fimbriae (SERI7/TAR) nucleation dependence which aggregative fimbriae coli and assembly system of strains of Salmonella, interesticities and coli and	05-APR-1999; 99US-0127888P. (UTVI-) UNIV VICTORIA. White AP, Doran JL, Collison SK,
05-APR-2000; 2000WO-CA000356.  05-APR-1999; 99US-0127888P.  (UVVI-) UNIV VICTORIA.  White AP, Doran JL, Collison SK, Kay WW;  WPI; 2000-672631/65.  N-PSDB; AAC64628.  Recombinant agfA gene having a segment replaced by a foreign DNA which encodes foreign epitope or antigen, expresses recombinant Aprotein useful for eliciting immune response in animal.  Disclosure; Page 138; 139pp; English.  The present invention describes a recombinant agfA gene (I) where segment of the gene has been replaced by a segment of a foreign Esegment of this agreement which encodes a foreign epitope or antigen. Also describ(1) use of thin aggregative fimbriae (SERIJ/TAR) nucleation depends assembly system of strains of Salmonella, Escherichia coli and assembly system of strains of Salmonella, Escherichia coli and AgfA. CscA and AgfA. CscA encodesulvely; (2)	05-APR-2000; 2000WO-CA000356.  (UTVI-) UNIV VICTORIA.  White AP, Doran JL, Collison SK, Kay WW;  WPI; 2000-672631/65.  N-PSDB; AAC64628.  Recombinant agfA gene having a segment replaced by a foreign DNA which encodes foreign epitope or antigen, expresses recombinant A protein useful for eliciting immune response in animal.  Disclosure; Page 138; 139pp; English.  The present invention describes a recombinant agfA gene (I) where segment of the gene has been replaced by a segment of a foreign E segment of the gene has been replaced by a segment of a foreign E segment of the gene moodes a foreign epitope or antigen. Also describe the use of thin aggregative fimbriae (SEF17/TAF) nucleation depends sembly system of Stains of Salmonella, Escherichia coli and Enterobacteriaceae for the production of fimbriae congrising reconstraints.	05-APR-1999; 99US-0127888P.  (UYVI-) UNIV VICTORIA.  White AP, Doran JL, Collison SK, Kay WW;  WPI; 2000-672631/65.  N-PSDB; AAC64628.  Recombinant agfA gene having a segment replaced by a foreign DNA which encodes foreign epitope or antigen, expresses recombinant Aprotein useful for eliciting immune response in animal.  Disclosure; Page 138; 139pp; English.  The present invention describes a recombinant agfA gene (1) where segment of the gene has been replaced by a segment of a foreign sequence which encodes a foreign epitope or antigen. Also describe assembly system of strains of Salnonella, Escharichia coll and Enrarchardere for the production of finbriae comprising red	05-APR-2000; 2000WO-CA000356.  05-APR-1999; 99US-0127888P.  (UTVI-) UNIV VICTORIA.  White AP, Doran JL, Collison SK, Kay WW;  WPI; 2000-672631/65.  N-PSDB; AAC64628.  Recombinant agfA gene having a segment replaced by a foreign DNA which encodes foreign epitope or antigen, expresses recombinant Aprotein useful for eliciting immune response in animal.  Disclosure; Page 138; 139pp; English.  The present invention describes a recombinant agfA gene (I) where segment of the gene has been replaced by a segment of a foreign Esquence which encodes a foreign epitope or antigen. Also describe assembly system of strains of Salmonella, interiorian and assembly system of strains of Salmonella, interiorian and assembly system of strains of Salmonella, interiorian and strains of Salmonella, interiorian and strains of Salmonella, interiorian and strains of Salmonella, interiorian and strains of Salmonella, interiorian and strains of Salmonella, interiorian	05-APR-2000; 2000WO-CA000356. 05-APR-1999; 99US-0127888P. 12-OCT-2000. 05-APR-2000; 2000WO-CA0000356. 05-APR-1999; 99US-0127888P. (UVVI-) UNIV VICTORIA. White Ab, Doran JL, Collison SK, Kay WW; WPJ; 2000-672631/65. N-PBDB; AAC64628. Recombinant agfA gene having a segment replaced by a foreign DNA which encodes foreign epitope or antigen, expresses recombinant Aprocein useful for eliciting immune response in animal. Disclosure; Page 138; 139pp; English. The present invention describes a recombinant agfA gene (I) where segment of the gene has been replaced by a segment of a foreign Esegment of the gene has been replaced by a segment of a foreign Esegment of the gene has been replaced by a segment of a foreign Esegment of the gene has been replaced by a segment of a foreign Esegment of the produce which encodes a foreign epitope or antigen. Also describ (1) use of thin aggregative fimbriae (SEFI)/TARF) nucleation dependance which encodes a foreign epitope or antigen. Also describ Strains of Strains of Salmonella, Escherichia coli and assembly system of strains of Salmonella, Escherichia coli and aster. CacA and AcfA. CacA challed the production of fimbriae comparising reco	12-OCT-2000. 05-APR-1999; 99US-0127888P. (UTVI-) UNIV VICTORIA. White AP, Doran JL, Collison SK, Kay WW; WPI; 2000-672631/65. N-PSDB; AAC64628. Recombinant agfA gene having a segment replaced by a foreign DNA which encodes foreign epitope or antigen, expresses recombinant A protein useful for eliciting immune response in animal. Disclosure; Page 138; 139pp; English. The present invention describes a recombinant agfA gene (I) where segment of the gene has been replaced by a segment of a foreign E segment of the gene has been replaced by a segment of a foreign epitope or antigen. Also describe in useful system of strains of Salmonella, Escherichia coli and assembly system of Strains of Salmonella, Escherichia coli and Enterobacteriaceae for the production of fimbriae contribing.	12-OCT-2000. 05-APR-1999; 99US-0127888P. (UVVI-) UNIV VICTORIA. White AP, Doran JL, Collison SK, Kay WW; WPI; 2000-672631/65. N-PSBB; AAC64628. Recombinant agfA gene having a segment replaced by a foreign DNA which encodes foreign epitope or antifen, expresses recombinant Aprocessing for eliciting immune response in animal. Disclosure; Page 138; 139pp; English. The present invention describes a recombinant agfA gene (I) where segment of the gene has been replaced by a segment of a foreign Esequence which encodes a foreign epitope or antigen. Also describe in use of thin aggregative fimbriae (SEF17/TAF) nucleation dependence which encodes a foreign epitope or antigen. Also describe assembly system of strains of Salmonella! Escherichia coll and Enrencharteria case to the norduction of fimbriae comprising recomprehence.	12-OCT-2000. 05-APR-2000; 2000WO-CA000356. 05-APR-1999; 99US-0127888P. (UVVI-) UNIV VICTORIA. White Ab, Doran JL, Collison SK, Kay WW; WPJ; 2000-672631/65. N-P8DB; AAC64628. Recombinant agfA gene having a segment replaced by a foreign DNA which encodes foreign epitope or antigen, expresses recombinant A protein useful for eliciting immune response in animal. Disclosure; Page 138; 139pp; English. The present invention describes a recombinant agfA gene (I) where segment of the gene has been replaced by a segment of a foreign E segment of the neodes a foreign epitope or antigen. Also describe used thin aggregative fimbriae (SERI) TARY indication deperited assembly system of strains of Salmonella, Escherichia recombinations.	12-OCT-2000. 05-APR-2000; 2000WO-CA000356. 05-APR-1999; 99US-0127888P. Disclosure; Page 138; 139pp; English.  The present invention describes a recombinant agfA gene (1) where segment of the gene has been replaced by a segment of a foreign Esement of the gene has been replaced by a segment of a foreign Esement of the gene in animal.  The present invention describes a recombinant agfA gene (1) where segment of the gene foreign epitope or antigen. Also describe segment of the gene foreign epitope or antigen. Also describe segment of the gene of fainting factoriances of fainting and assembly system of Stains of Salmonella, Escherichia coli and Enerobacteriaceae for the production of finbriae comprising recomplished.	WO200060102-A2.  12-OCT-2000.  05-APR-1999; 99US-0127888P.  (UVVI-) UNIV VICTORIA. White AP, Doran JL, Collison SK, Kay WW; WPI; 2000-672631/65. N-PSDB; AAC64628. Recombinant agfA gene having a segment replaced by a foreign DNA which encodes foreign epitope or antigen, expresses recombinant Aprotein useful for eliciting immune response in animal.  Disclosure; Page 138; 139pp; English.  The present invention describes a recombinant agfA gene (1) where segment of the gene has been replaced by a segment of a foreign esemence which encodes a foreign epitope or antigen. Also describe sequence which encodes a foreign epitope or antigen. Also describe assembly system of strains of Sanhonella, Escherichia coll and Enrarchardere for the production of finbriae comprising reachers.	WO200060102-A2.  12-OCT-2000.  05-APR-1999; 99US-0127888P.  (UTVI-) UNIV VICTORIA.  White AP, Doran JL, Collison SK, Kay WW; WPI; 2000-672631/65.  N-PSDB; AAC64628.  Recombinant agfA gene having a segment replaced by a foreign DNA which encodes foreign epitope or antigen, expresses recombinant Aprotein useful for eliciting immune response in animal.  Disclosure; Page 138; 139pp; English.  The present invention describes a recombinant agfA gene (I) where segment of the gene has been replaced by a segment of a foreign Esegment of the neodes a foreign epitope or antigen. Also describ assembly system of strains of Salmonella.	WO200060102-A2. 12-OCT-2000. 05-APR-2000; 2000WO-CA000356. 05-APR-1999; 99US-0127888P. (UYVI-) UNIV VICTORIA. White AP, Doran JL, Collison SK,
WO200060102-A2.  12-OCT-2000. 05-APR-1999; 99US-0127888P. (UVVI-) UNIV VICTORIA. White AP, Doran JL, Collison SK, Kay WW; WPI; 2000-672631/65. N-PSDB; AAC64628. Recombinant agfA gene having a segment replaced by a foreign DNA which encodes foreign epitope or antigen, expresses recombinant Aprotein useful for eliciting immune response in animal. Disclosure; Page 138; 139pp; English. The present invention describes a recombinant agfA gene (I) where segment of the gene has been replaced by a segment of a foreign Esquence which encodes a foreign epitope or antigen. Also describ segment of this aggregative fimbriae (SERI)/TAR) nucleation deperations of strains of Salmonella, Escherichia coli and assembly system of strains of Salmonella, Escherichia coli and ApfA. CscA and AcfA. CscA and AcfA. CscA and AcfA. CscA and AcfA. Submortal submitts, respectively; (2)	WO200060102-A2.  12-OCT-2000. 05-APR-1999; 99US-0127888P. (UVVI-) UNIV VICTORIA. White AP, Doran JL, Collison SK, Kay WW; WPI; 2000-672631/65. N-PSDB; AAC64628. Recombinant agfA gene having a segment replaced by a foreign DNA which encodes foreign epitope or antigen, expresses recombinant Aprofecin useful for eliciting immune response in animal. Disclosure; Page 138; 139pp; English. The present invention describes a recombinant agfA gene (I) where segment of the gene has been replaced by a segment of a foreign Esegment of the gene has been replaced by a segment of a foreign epitope or antigen. Also describe segment which encodes a foreign epitope or antigen. Also describe (I) use of thin aggregative fimbriae (SERI7/TAF) mucleation dependence which acceptate of Salmonella, Escherichia coli and assembly system of Strains of Salmonella, Escherichia coli and Enterobacteriaceae for the production of fimbriae contribing.	WO200060102-A2.  12-OCT-2000.  05-APR-1999; 99US-0127888P.  (UYVI-) UNIV VICTORIA.  White AP, Doran JL, Collison SK, Kay WW; WPI; 2000-672631/65.  N-PSDB; AAC64628.  Recombinant agfA gene having a segment replaced by a foreign DNA which encodes foreign epitope or antigen, expresses recombinant Aprotein useful for eliciting immune response in animal.  Disclosure; Page 138; 139pp; English.  The present invention describes a recombinant agfA gene (1) where segment of the gene has been replaced by a segment of a foreign segment of the gene has been replaced by a segment of a foreign sequence which encodes a foreign epitope or antigen. Also describe assembly system of strains of Sanhonella, Escherichia coli and Enrarchardere for the production of fimbriae comprising reacher ancheriaceae for the production of fimbriae comprising reachers.	WO200060102-A2.  12-OCT-2000. 05-APR-1999; 99US-0127888P. (UTVI-) UNIV VICTORIA. White AP, Doran JL, Collison SK, Kay WW; WPI; 2000-672631/65. N-PSDB; AAC64628. Recombinant agfA gene having a segment replaced by a foreign DNA which encodes foreign epitope or antigen, expresses recombinant Aprotein useful for eliciting immune response in animal.  Disclosure; Page 138; 139pp; English. The present invention describes a recombinant agfA gene (I) where segment of the gene has been replaced by a segment of a foreign Esquence which encodes a foreign epitope or antigen. Also describe use of thin aggregative fimbriae (SERI)/TAR) nucleation deperited assembly system of strains of Salmonella.	WO200060102-A2. 12-OCT-2000. 05-APR-2000; 2000WO-CA000356. 05-APR-1999; 99US-0127888P. (UYVI-) UNIV VICTORIA. White AP, Doran JL, Collison SK,

Recombinant agfA gene having a segment replaced by a foreign DNA which encodes foreign epitope or antigen, expresses recombinant Aprotein useful for eliciting immune response in animal.  Disclosure; Page 138; 139pp; English.  The present invention describes a recombinant agfA gene (1) where segment of the gene has been replaced by a segment of a foreign Esement of the gene has been replaced by a segment of a foreign Esement of the gene in animal.  The present invention describes a recombinant agfA gene (1) where segment of the gene foreign epitope or antigen. Also describe segment of the gene foreign epitope or antigen. Also describe segment of the gene of fainting factoriances of fainting and assembly system of Stains of Salmonella, Escherichia coli and Enerobacteriaceae for the production of finbriae comprising recomplished.	WO200060102-A2.  12-OCT-2000.  05-APR-1999; 99US-0127888P.  (UVVI-) UNIV VICTORIA. White AP, Doran JL, Collison SK, Kay WW; WPI; 2000-672631/65. N-PSDB; AAC64628. Recombinant agfA gene having a segment replaced by a foreign DNA which encodes foreign epitope or antigen, expresses recombinant Aprotein useful for eliciting immune response in animal.  Disclosure; Page 138; 139pp; English.  The present invention describes a recombinant agfA gene (1) where segment of the gene has been replaced by a segment of a foreign esemence which encodes a foreign epitope or antigen. Also describe sequence which encodes a foreign epitope or antigen. Also describe assembly system of strains of Sanhonella, Escherichia coll and Enrarchardere for the production of finbriae comprising reachers.	WO200060102-A2.  12-OCT-2000.  05-APR-1999; 99US-0127888P.  (UTVI-) UNIV VICTORIA.  White AP, Doran JL, Collison SK, Kay WW; WPI; 2000-672631/65.  N-PSDB; AAC64628.  Recombinant agfA gene having a segment replaced by a foreign DNA which encodes foreign epitope or antigen, expresses recombinant Aprotein useful for eliciting immune response in animal.  Disclosure; Page 138; 139pp; English.  The present invention describes a recombinant agfA gene (I) where segment of the gene has been replaced by a segment of a foreign Esegment of the neodes a foreign epitope or antigen. Also describ assembly system of strains of Salmonella.	WO200060102-A2. 12-OCT-2000. 05-APR-2000; 2000WO-CA000356. 05-APR-1999; 99US-0127888P. (UYVI-) UNIV VICTORIA. White AP, Doran JL, Collison SK,

The present invention describes a recombinant agfA gene (1) where a segment of the gene has been replaced by a segment of a foreign DNA segment of the gene has been replaced by a segment of a foreign DNA segment of thin aggregative finbriae (SEP17/TAR) incleation depended assembly system of strains of Salmonella, Escherichia coli and assembly system of strains of Salmonella, Escherichia coli and antercobacteriaceae for the production of fimbriae comprising recombinant GT AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively, (2) directing recombinant gene into the chromosome of the homologous species, replacing the native comprising separating a recombinant and minmal, we comprising separating an amino acid polymer response in an animal, comprising separating an amino acid polymer comprising a recombinant and introducing the protein containing a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, B. coli or acid sequence or sequences grown on a Salmonella, B. coli or acid sequence host cell, from the host cell and introducing the polymer into the animal in conjunction with a carrier or dilutent. (I) is useful for the expression of recombinant AgfA protein which is useful for eliciting an immune response in an animal. In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrin protein possesses both the immunogenicity and adhesion properties relevant for a useful contains the inserted epitops, and hybrid fimbrine are easy and inexpensive to purify in large amount. The present sequence is given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              61 SDARKSETTITQSGYGNGADVGQGADNSTIELTQNGFRNNATIDQWNAKN-----YDQ 113

The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are:

(I) use of thin aggregative fimbriae (SEP1/TAR) nucleation depended assembly system of strains of Salmonella Escherichia coli and Enterobacteriaceae for the production of fimbriae comprising recombinant of directing recombinant by the combination of a recombinant gene are the chromosome of the homologous species, respectively; (2) directing recombinant gene accombinant gene back into the chromosome of the homologous species, replacing the native copy of that gene; and (4) eliciting an immune response in an animal. Copy of that gene; and (4) eliciting an immune response in an animal protein containing a replacement segment or segments of foreign amino and segment or segments of foreign amino and segment or segments of foreign amino and sequence or sequences grown on a Salmonella, B. coli or Enterobacteriaceae host cell, from the host cell and inroducing the polymer into the animal in conjunction with a carrier or diluter. (I) is useful for the expensesion of recombinant AgfA protein which is useful for useful for the expense in an animal. In a finitial presentation system the heterologous antigens are presented in high numbers (up to 500,000 copples/cell), the hybrid fimbrin protein possesses both the immunogens, which may be important for directing an immune response in municed epitope, and hybrid fimbriae are easy and inexpensive to purify in large amount. The present sequence is given in the exemplification of the present invention
                                                    Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ò

The present sequence represents agfA encoded by the full agfA gene derived from Salmonella enteritidis 27655-3b. The nucleic acid can be used to provide diagnostic assays for Salmonella and/or enteropathogenic bacteria of the family Enterobacteria. It can also be used to provide proteins and antibodies which can be used for assays. The nucleic acid sequence can be used to provide probes or primers which can specifically hybridise to nucleic acid molecules from greater than 99% of Salmonella strains that are pathogenic to warm-blooded animals relative to nucleic 25-MAR-2003 to correct PF field.)

Sequence 151 AA;

Isolated Salmonella gene agfA - used for diagnosis of Salmonella or enteropathogenic bacteria of the Enterobacteria family.

Example 2; Fig 7; 85pp; English.

The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA cases a foreign epicope or antigen. Also described are: (1) use of thin aggregative finbriae (SPENJ/TAP) nucleation depended assembly system of strains of Salmonella, Escherichia coli and cassembly system of strains of Salmonella, Escherichia coli and assembly system of strains of Salmonella, Escherichia coli and correct of the production of finbriae comprising recombinant of directing recombination of a recombination of a recombinant gene into the chromosome of the homologous species, (3) directing recombination of a recombinant gene comprising separating an amino acid polymer comprising a recombinant pact of the homologous species, replacing the native comprising separating an amino acid polymer comprising a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or seful for the expression of recombinant and introducing the carrier for system the heterologous antigens are presented in high numbers (up to system the heterologous antigens are presented in high numbers (up to system the heterologous antigens are presented in high numbers (up to system the heterologous antigens are presented in high numbers (up to vaccine, the carrier fimbrial subunit proteins are usually strong immunogens, which may be important for directing an immune response conservable in a manner and epicope, and hybrid fimbriae are easy and given in expensive to purify in large amount. The present sequence is given in the exemplificatio
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           61 SDARKSETTITQSGYGNGADVGQGADNSTIELTQNGFRNNATIDQWNAK------ 109
